

Our Process & Product Application

Woven cotton tape manufactured under the highest manufacturing standards utilizing high quality, cotton yarns. The construction is commonly referred to as plain weave. Tape is unfinished to allow maximum varnish penetration. Saylor cotton tapes are manufactured in an ISO 9001 facility. Saylor Cotton tapes are primarily used in electrical applications as coil wraps, insulation, mechanical reinforcement, transformer windings and cable wrap. Cotton will lose tensile strength in extreme, elevated temperatures. All Saylor Cotton tapes can be manufactured with a center reference line. Special constructions and widths are available by request. Standard put-up is 36 yards per roll on a 3/8" cardboard core. Color is Natural/White.
